

Nongnuch Jindarattanaporn. (2021, January-June, Factors Effecting Internet Literacy among Thai Teenagers : Journal of Social Sciences Srinakharinwirot University. 24 (1) : 81-100

Summary of research results Thai teenagers use the internet every day and use it more than 1 hour per day. But more than half of Thai youths have low Internet skills and abilities. Economic status, region and territories were not correlated with Internet skills and abilities of Thai adolescents. In addition, Internet access method factors were number of access locations and number of devices to access the Internet. and internet usage behavior which consists of frequency of use and the number of hours to use the Internet Affects the ability of Thai adolescents to use the Internet, that is, Thai adolescents access the Internet in many different places. Use multiple devices to access the Internet. Including the frequency and number of hours to use the Internet is high. As a result, this group of teenagers has a high level of Internet skills as well.
